Summary

Staff Product Manager specializing in data platforms, developer platforms, and AI/agentive governance at global scale. Extensive experience leading Data Services and Data Platform product management for billions of transactions and 100M+ scale entities, spanning AI & Data Governance, agentive AI platforms (Agentive, MCP), big data, distributed systems, real-time platforms, media streaming, payments, and legal solutions.

Professional Experience

GitHub, a Microsoft Company – Remote Staff Product Manager, Data Platform

Aug 2026 - Present

Leading Product Management of Data Services and the Data Platform at GitHub scale, bringing seven years of self-service, AI-native platform experience and agentive governance delivery from Visa to developer tooling used by millions of builders.

- Leading Product Management for Data Services & Data Platform, setting direction for how GitHub's data infrastructure and platform APIs scale to serve its global developer and enterprise customer base.
- Bringing forward self-service platform thinking (Parsec), scaling foundational infrastructure with trust and audit-readiness (Tusker), and direct experience shipping a production-grade agentive AI platform with 30-50 collaborating agents (ViDA.AI) — where automation and human judgment compose rather than compete.
- Partnering across Engineering, Data, and Platform teams to bring a governance-and-trust lens to data platform decisions without slowing down builders operating at GitHub scale.
- Ramping on GitHub's platform surface area and a builder community at a scale beyond any internal enterprise platform, translating that context into a near-term data platform roadmap.

Visa Inc – Foster City, CA Director, Data and AI Governance

July 2019 - Aug 2026

Data and AI Governance is a client-focused team that assesses Visa-wide initiatives for governance and data use across Visa products, programs, and public engagements, in deep collaboration with legal teams (Privacy, Competition, Affiliates, IP, etc.) to review and guide teams across markets.

- **AI-Driven GRC Platform:** Architected and shipped a production-grade agentive AI governance platform with 30-50 collaborating agents (Retriever, Analyst, Verifier, Executor, Risk Engine, Supervisor), a multi-hundred-thousand-line codebase, 400-500 APIs, and 80-120 features — cutting assessment review time by roughly 80-95% and enabling a multi-million dollar revenue unlock by evolving governance to operate at the speed of business with trust and safety.
- **Agentive Architecture:** Replaced static workflows with auditable, multi-step Agent Runs featuring evidence-driven Claims, multi-dimensional Rubric Scores, explainable Decision Traces, Model Context Protocol (MCP) integration for natural-language governance intake, and a knowledge graph that compounds context with every run.
- **Data & AI Governance Lead:** Navigated complex use cases to ensure Data Use Policy guidelines covered every review; shaped Responsible AI direction, Data Use Policy guidance, and AI inventions in close partnership with Privacy, Competition, Affiliates, and IP legal teams.
- **NextGen Merchant Data Platform:** Set a 3-year Tech Product Leadership strategy capturing all relationships of entities in a VisaNet transaction (Merchants, PayFacs, Acquirers) for 100M-150M merchant locations globally, powered by GenAI/LLM models for entity detection, recognition, classification, and hyperlocal data.
- **Single Threaded Owner** managing a team of senior engineers and product managers overseeing 30+ big data products and platforms at a scale of hundreds of billions of transactions Visa-wide.
- **Visa Self-Supported Core Hadoop 3.x:** Drove vision, strategy, and execution of Visa's own self-supported distribution, scaling the team from a handful of engineers to 60-90+ members and saving tens of millions of dollars over 5 years.
- Presented 15-25 roadshows to Visa tech divisions and big data users on the multi-year Hadoop in-place upgrade journey spanning 150-200 data applications, 75-100 clusters, and hundreds of PB of storage.
- Led as PM to build a highly scaled agent-based API platform managing data services (10K-15K+ servers) with 1,200-1,800 APIs (NodeJS/ReactJS); onboarded roughly a dozen teams to hosted solutions for governance, storage, queue, and cluster management, reducing dev time from months to weeks.
- Presented and passed external audit of the Hadoop program with the Federal Reserve, FBA, and government agencies.
- Defined 3-5 year product strategy across core data, serving, storage (HDFS/GPFS), cluster insights, governance, catalog, and the cloud (GCP) adoption strategy.

- **Closing chapter:** Left Visa in August 2026 after seven years spent taking ideas from 0-to-1 and carrying them to 1-to-100 across Parsec, Tusker, the NextGen Merchant Data Platform, and ViDA.AI — which continues on, carried forward into Visa's next-generation risk-agent tool chain.

Hulu HQ – Santa Monica, CA
Senior Technical Manager, Hulu Platform Team

Mar 2016 - June 2019

Team mission was to support and advance the datastore infrastructure landscape at Hulu.

- Managed Datastore Infrastructure team providing Database as a Service (MySQL, Cassandra, MongoDB, 250+ clusters), caching services (Redis: 70TB/2K clusters), and MSSQL (2005 to 2017).
- Launched Hulu Live TV and led big event planning & execution to scale datastore services for Superbowl, Game of Thrones Finale, Winter Olympics, and NCAA — scaling Cassandra to 1M+ queries/sec and MySQL to over 100K requests/sec.
- Led cross-functional AWS Cloud migration with 50+ scrum teams covering cost estimates, compatibility, Terraform templating, datastore adoption, and migration planning.
- Led cross-team collaboration across Cloud, NOC, Chaos, Security, Platform, DevOps, and Data Stores.
- Presented datastore vision and platform strategy to broader forums and to C-level executives.

Intuit – Woodland Hills, CA

Feb 2007 - Mar 2016

Senior Engineering Manager, Payments Activation & Onboarding (2009-2016)

- Grew a high-performing engineering team from 2 to 12 engineers, defining and executing all aspects of technology initiatives (development, architecture, design, CI/CD, quality) for payment activation across QuickBooks Online, GoPayment, QB Desktop, and QB PoS.
- Led integrations with Adyen Payments for Underwriting, Chase Paymentech, First Data, MasterCard sanctioned list, IP Commerce, AT&T, Experian, OFAC, and OpenText Case/Document/CRM Management.
- Led complex Open Pricing initiative for QuickBooks across 6 scrum teams through all stages of software development.
- Created market-ready products (Spark Lessons); led code jams, innovation jams, and idea jams, winning an award for the most innovative use of RESTful web services to solve customer problems.

Senior Software Engineer, MyCorporation by Intuit (2007-2009)

- Developed 37+ business creation products including LLCs, Corporations, and Copyrights.
- Created the interview UI/billing portal using JSF and implemented Document/Workflow management systems.

Procter & Gamble – Cincinnati, OH

May 2005 - Jan 2007

Senior Software Engineer

- Delivered end-to-end software development on complex projects, implementing data visualization using Ajax to create "Excel-like" online spreadsheets.
- Released multiple project versions impacting 5,000+ manufacturing supplier companies.

Education

Master of Science, Computer Science — University of Dayton, OH (May 2005)

BS Computer Science & Engineering — Visvesvaraya Technological University (JSSATE) (June 2002)
