Harish Raghavendra

Product Leader · Data Platforms · AI Governance & Agentic Systems

Fremont, CA · harish.raghav@gmail.com · (818) 324-5080 · linkedin.com/in/harishraghavendra · drivenbyvalues.github.io

SUMMARY

Product leader with 20+ years building data platforms, developer platforms, and governance systems at global scale, including 15+ years owning product outcomes across PM, de facto PM, and engineering-leadership roles. At Visa, took four platforms from 0→1→100 at 215B+ transactions a year, most recently **ViDA.AI**, an agentic governance, risk & compliance platform that cut assessment time 80%+ and unlocked multi-million-dollar revenue. Hands-on builder who writes production code and ships agentic systems on Claude and GPT. Now leading Product Management for Data Services and the Data Platform at GitHub.

EXPERIENCE

GitHub, a Microsoft Company

Aug 2026 – Present · Remote

Staff Product Manager, Data Services & Data Platform

- Lead Product Management for GitHub's Data Services and Data Platform, setting direction for how data infrastructure and platform APIs scale for a global developer and enterprise customer base.
- Bring a governance-and-trust lens (privacy, auditability, data controls) to data platform decisions without slowing builders down.

Visa Inc.

Jul 2019 – Aug 2026 · Foster City, CA

Director, Data & AI Platform and Governance

AI GOVERNANCE (2024–2026)

- **ViDA.AI, end-to-end agentic governance:** Built the entire platform first outside Visa as an open-source, MIT-licensed project (GRC Conductor), then forked and customized it as Visa's internal GRC platform, automating the path from conversational intake to risk scoring, specialist review, and decision. Cut assessment turnaround 80%+ (multi-day to near real time) and unlocked multi-million-dollar revenue. Now carried forward into Visa's next-generation risk-agent tool chain.
- **Multi-agent architecture:** 3-tier agent-to-agent pipeline of 20 skills, 6 command agents, and 4 workflows (low-risk, full review, escalated, third-party risk) on a signed message bus, with saga rollback and SLA tiers of 2 hours, 5 days, and 20 days.
- **Thresholds & low-risk automation:** Each skill passes a confidence score down the chain, and any score under 0.80 forces escalation. Auto-approval requires risk ≥75, confidence ≥0.90, and no DPIA/LIA, with fixed 0.85/0.88 confidence floors that policy settings can't lower. The LLM scores and explains; a deterministic engine decides. Low-risk cases auto-approve in under 2 hours.
- **Intake & reviewer agents:** Conversational intake through a Claude MCP integration (Claude Code and Claude Desktop), gated on a combined template-coverage and LLM-rubric quality score before auto-submit, with AI coaching while users draft. Reviewer copilots pre-fill reviews, write privacy, data-use, and AI-governance notes, and estimate control ratings for residual risk. AI-suggested and human-edited fields are tracked separately as a feedback signal.
- **Grounding, quality & cost controls:** Two-stage RAG (pgvector top-50, then cross-encoder rerank) scoped to policy domain and user role. Claim-level evidence with contradiction detection. Prompt-quality scoring (GEPA). Per-assessment token and cost budgets, circuit breakers, LLM caching, and model-alias routing with fallback across OpenAI, Azure, and Anthropic. Every agent run is audited with tokens, cost, and confidence.
- **Regulatory automation:** Automated DPIA/LIA, EU AI Act risk classification, and bias assessment. Compliance matrix mapped to EU AI Act, NIST AI RMF, and ISO 42001 (37 articles). Drift detection triggers re-assessment.
- **Data & AI Governance Deputy Lead:** Shaped Data Use Policy and Responsible AI guidance and reviewed high-risk use cases with Privacy, Competition, Affiliates, and IP legal teams.

DATA PLATFORMS (2019–2024)

- **Head of Technical Product Management:** Managed senior PMs and TPMs as single-threaded owner of 30+ big data products and platforms at 215B+ transactions ($15T payment volume). Set 3–5 year strategy across core data, serving, storage, governance, catalog, and GCP adoption.
- **Tusker, Visa's self-supported Hadoop 3.x distribution:** Drove vision through execution, growing the team from 3 to 80+ engineers across 5 scrum teams and saving $80M+ over 5 years. Presented and passed external audit with the Federal Reserve, FBA, and government agencies.
- **Hadoop in-place upgrade:** Ran 20+ roadshows across all Visa tech divisions for a 2-year upgrade of 175+ data applications, 90+ clusters, and hundreds of PB.

- **Parsec self-service platform:** Product owner for an agent-based, multi-tenant platform managing 12K+ servers through 1,500+ APIs. Onboarded 14 teams to hosted storage, queue, cluster, and governance services, cutting dev time from months to weeks. Personally contributed 400+ PRs.
- **NextGen Merchant Data Platform:** Authored the 3-year strategy and target architecture, adopted by multiple engineering teams, modeling Merchant–PayFac–Acquirer relationships across 130M+ merchant locations with GenAI/LLM entity resolution. Wrote baseline code for 15+ microservices. Led the data-quality vendor evaluation and the third-party data licensing (UN WIPO trademark database). Contributed AI inventions from this work.
- **Platform cost & metering:** Led cluster cleanup recovering 10+ PB and 5M+ small files. Authored the Metering-as-a-Service PRD.

Hulu

Mar 2016 – Jun 2019 · Santa Monica, CA

Senior Technical Program Manager, Platform & Cloud Engineering

De facto Product Manager for Datastore Platforms: owned roadmap, prioritization, and build-vs-buy decisions with tech leads, alongside program management.

- **Database-as-a-Service:** Owned the datastore platform roadmap for MySQL, Cassandra, and MongoDB (250+ clusters), Redis (70TB / 2K+ clusters), and MSSQL as subscribers grew from 10M to 25M+.
- **Hulu Live TV launch:** Led big-event scaling for the Super Bowl, Game of Thrones finale, Winter Olympics, and NCAA (Cassandra 1M+ qps, MySQL 100K+ rps) with no datastore-led incidents.
- **AWS cloud migration:** Led migration planning across 50+ scrum teams, covering cost models, compatibility, Terraform templates, and datastore adoption.
- **Compliance:** Led the SOX compliance program for datastore platforms and implemented SOX, PCI, and PII controls on database infrastructure.

Intuit

Aug 2009 – Mar 2016 · Woodland Hills, CA

Senior Engineering Manager, Payments Activation & Onboarding (Lead Engineer → Sr. Engineering Manager)

Also served as Product Manager for Payments Activation: owned requirements, prioritization, and roadmap as activation lead and engineering manager.

- **Merchant activation & onboarding** for QuickBooks Online, GoPayment, QB Desktop, and QB Point of Sale. Grew the team from 2 to 12 engineers. Built services for internal and third-party developers.
- **Risk & compliance decisioning:** Built underwriting that checks credit, CFI, and MasterCard negative and sanctions lists, plus OFAC screening and Experian identity verification. Integrated Adyen, Chase Paymentech, First Data, IP Commerce, and AT&T.
- **Origin-Based Transaction Pricing:** Initiative tech lead across 6 scrum teams. Won Intuit's most-innovative-idea award and built the Spark Lessons product during incubation week.

EARLIER CAREER

- **MyCorporation by Intuit**, Tech Lead / Senior Software Engineer (2007–2009): 37+ business-formation products with state-by-state legal compliance rules, RBAC, and audit trails.
- **Procter & Gamble (Capgemini–Sogeti)**, Senior Software Engineer (2005–2007): supplier platform used by 5,000+ manufacturing suppliers. **Infosys**, Software Engineer (2002).
- **University of Dayton**, Research Assistant (2003–2005): congestion-adaptive routing for mobile ad hoc networks, published in IEEE conference and journal.

SELECTED BUILDS

- **GRC Conductor** (MIT-licensed, grc-conductor.up.railway.app): the open-source foundation of ViDA.AI, plus an on-chain audit registry (Polygon) that was not part of the Visa deployment. 300+ APIs and 8,800+ automated tests. TypeScript, React, PostgreSQL/pgvector.
- **NammaSeva**: multi-tenant hyperlocal services marketplace with voice and AI-assisted intake (React Native, NestJS, PostGIS).

SKILLS

AI & agents	Multi-agent (A2A) orchestration, MCP, RAG with reranking (pgvector), rubric scoring & confidence gating, prompt-quality scoring, token/cost budgets, model routing & fallback, decision traces, Claude & GPT APIs
Data platforms	Hadoop, Hive, Spark, Kafka, Trino/Presto, Airflow · PostgreSQL, MySQL, Cassandra, MongoDB, Redis · data quality & catalog
Governance & risk	SOX, PCI, ITGC, PII/GDPR (DPIA, LIA), EU AI Act risk classification, NIST AI RMF, external audit readiness
Build	TypeScript/Node.js, React, Python, Java/Spring Boot, SQL · AWS, GCP, Kubernetes, Terraform
Education	M.S. Computer Science, University of Dayton · B.E. Computer Science & Engineering, Visvesvaraya Technological University · Certified ScrumMaster
