Harish Raghavendra

Director @ Visa | Data, AI Policy & Governance | Product Leadership
| Technical Leadership
San Francisco Bay Area

Summary

At Visa, my role as Director of Data & AI Governance, defining AI, and Data Use policies at Visa engaging with legal counsel, privacy and other offices to protect brand, mitigate risk for Visa. Leveraging AI LLMs (GPT o3, o1, 4.1, Gemini, Sonnet models) to develop governance risk & compliance (GRC) platform. Previously lead Product Management to deliver Next Generation Global Merchant Data Platform at Visa. Focused on using advanced AI/ML models and hyperlocal data to revolutionize transaction insights across 130+ million merchant locations worldwide including data quality and insights.

With a proven track record of leadership at Hulu, I contributed substantially to scaling infrastructure services, fostering a surge in customer base and operational efficiency. At Visa, this expertise translates into crafting strategic goals and mentoring a team of senior product managers to pioneer data-driven products that power actionable travel insights, utilizing AI technologies like multiple GenAI models.

Experience

Visa

Director

July 2019 - Present (6 years 2 months)

Foster City, California, United States

- Focus on Data Policy & Governance interfacing with Privacy, AI and Legal stakeholders to support business in launching products in countries, regions and across the globe.

- Envisioned Next Generation Global Merchant Data Platform at VISA that captures all parties of a transaction (130 million locations) enabling VISA to build global merchant data products. Using Hyperlocal regional data sourcing,

multiple LLM and AI/ML Models, Graph representation with relations with foundational Data Quality and data governance incorporated.

- Presented VisaTravelInsights.AI to showcase using LLM (GPT-4) with RAG incorporating VisaNet Merchant data to deliver travel insights for airlines, airports businesses and airport operators.

- Head of Technical Product Management managing team of senior product managers delivering key platform products. Crafted goals with team, grow and mentor team to reach their full potential in their career that aligns with business goals.

- Product leadership to make self-supported Visa Hadoop distribution happen. Managed scope from 3 person team to expanding it over 80+ engineers before splitting team to 5+ scrum teams. Lead building, planning and upgrade of Core Hadoop distribution. Enabled Open-source services adoption at Visa at scale of 100s of petabytes. Provided product ownership for DataPlatform roadmaps, lead roadshows, and product reviews to multiple VISA business groups.

- Lead building self-service platform portal to manage multiple Hadoop, Kafka, NiFi, clusters that is multi-tenant highly available agent based platform. Provided administration, user insights, health metrics, RBAC, and hosting. Lead development of app-builder framework that is no-code, low code based UI/Service and model generator using Node.

- Technical Product Management building Big Data products like Spark as a Service, multi tenant cluster management, Agent based automations, Server Inventory, Platform governance & insights, HDFS/GPFS storage management.

Hulu

Senior Technical Program Manager

March 2016 - June 2019 (3 years 4 months)

Santa Monica, CA

As a cross-team Technical Program Manager, I was instrumental in delivering shared infrastructure services, which improved developer productivity and reduced operational costs, contributing to the growth of our customer base from 10 million to over 25 million users.

I successfully initiated, planned, and delivered several key projects, including migrating self-hosted databases to shared infrastructure, data center

migration, and database migration and upgrades. I also made significant improvements to our logging infrastructure, upgraded our shared PaaS application deployment using Aurora & Apache Mesos, and planned and executed the migration of databases to the cloud.

In addition, I scaled our infrastructure services to handle growth and spikes from large live events and led a SOX compliance project focused on datastore platforms. As a stand-in Technical Product Manager, I created roadmaps and engaged with stakeholders.

By implementing Agile and hybrid processes, I enhanced developer efficiency and ensured more predictable delivery of platform engineering projects. I also managed to reduce operational interruptions for several teams, thus improving their productivity and enabling them to do their best work.

Small Business Group, Intuit

9 years 2 months

Senior Engineering Manager

September 2009 - March 2016 (6 years 7 months)

Greater Los Angeles Area

As Senior Engineering Manager, I spearheaded a group of engineers in architecting and developing REST-based microservices to enable payments for web, software, and mobile apps. These microservices were built, improved, deployed, and scaled on both the Intuit hosting platform and AWS.

I also served as a Scrum Master and Scrum coach, promoting agile methodologies among cross-functional teams. I was instrumental in creating proof of concepts to demonstrate the next generation of payments, and took on responsibilities such as gathering functional requirements, developing technical specifications, project and test planning.

In addition, I acted as a technical subject matter expert, mentoring other engineers, conducting code reviews, setting up CI/CD, and leading the team in solving complex programming and design problems. I collaborated with cross-functional teams including QE, SCM, DBAs, Operations, and Product Management to set the engineering direction.

I successfully delivered numerous projects such as Activation Platform Services, Master Merchant on Chase Payment Tech, QuickBooks Point of Sale 2013, and more.

As an Agile Coach, I underwent training at Intuit and served as the Scrum Master for the Activation team, displaying expertise in JIRA/GreenHopper.

As Lead, I lead team of engineers to deliver projects end-to-end and coordinated dependencies between various teams for overall project delivery. I designed solutions for the Quickbooks POS for the back-end payments system and handled cross-functional dependencies related to Database, SCM, Shared Services, and UI. I worked closely with the QE team to deliver end-to-end testing with multi-team dependency.

Tech Lead/Senior Software Engineer

February 2007 - October 2009 (2 years 9 months)

Calabasas, CA

MyCorporation by Intuit specializes in document filing service for the formation of a company whether it is an LLC or Corporation. There are more than 37 products offered to customers including LLC, Corp, Trademarks, and Copyrights.

As a senior member of the technical team, actively involved in the design, implementation of a wide range of projects like creating online interview process, Customer Management System, Document Management System, centralized billing portal, Workflow management.

Procter & Gamble

Sr. Software Consultant (Cap Gemini - Sogeti)

May 2005 - January 2007 (1 year 9 months)

Cincinnati metropolitan area, Ohio, United States

I was recognized with the Sogeti Overachiever award for the second half of 2006 and received the OTACE 5.0 award twice for my contributions to a large-scale project. This project involved providing both technical and business expertise to implement a comprehensive software development process, catering to over 5000 end-user supplier companies.

I utilized cutting-edge technologies like Ajax to create user-friendly, "Excel-like" online spreadsheets for large scale data collection.

As an EV developer, I designed and implemented solutions that primarily involved creating PDF views for the end users, using technologies such as XSQL, XSL, Oracle XDB, JavaScript, Unix, and JRun.

I resolved long-standing bugs and provided ongoing support for the project.
I was part of the team that launched several versions of the product.
Additionally, I managed global infrastructure teams and trained them to provide first-level support.

University of Dayton

Research Assistant

August 2003 - May 2005 (1 year 10 months)

Dayton, Ohio Area

Created a new Congestion Aware protocol for a wireless ad-hoc mobile network, which ended up getting published in Journal, Conference in IEEE.
The research project was undertaken as a networking expert and implemented our protocols and simulated on (Network Simulator) NS-2.

Created a journal submission website using PHP and MySQL on Unix system.
Academic Editors from Intel, Lawrence Livermore Lab in California participated in the site to review the papers.

JSS Academy Of Technical Education Karnataka

System Network Administrator

June 2000 - July 2002 (2 years 2 months)

As network administrator handled unix servers (IBM Infinity), setup QMail email server, apache web servers, clustered linux based on beowulf, network routing, traffic shaping, packet analysis, mass installations of linux on desktops using kickstart. Network management, printer management, bandwidth management, remote desktop support, Linux kernel development (kernel configuration on redhat for smaller, optimized memory footprint), FTP server setup, squid proxy server. Used ethereal, packet sniffer, air stumbler.

Infosys Technologies Ltd

Software Engineer

2002 - 2002 (less than a year)

Building Java Web application (JSP, Servlets, Javascript) with Oracle backend

Education

University of Dayton

Masters, Computer Science · (2005)

Visvesvaraya Technological University
